

Students want to know how to make sense of New Zealand's climate emergency now.

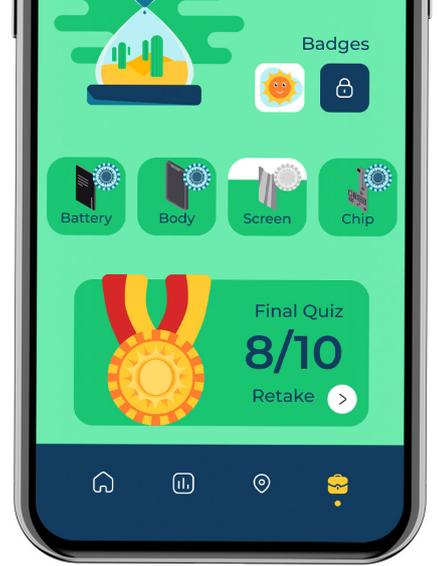

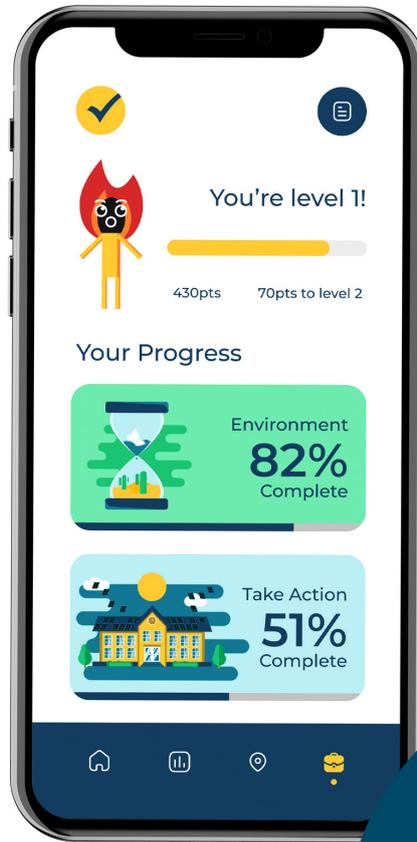

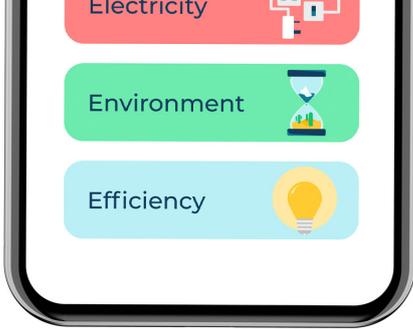

— Connect your school to the internationally recognised Solar For Schools community.

For a limited time we are offering our new Student App free of charge. Designed by international experts, it brings climate change education to life. It inspires learning through a gaming format, encouraging students to learn about their environment while designing a solar energy project for their school.

While the expense of solar energy for most New Zealand schools is prohibitive, in our community schools have successfully funded solar energy projects and are benefiting from shared teaching resources that inspire students.

Supported by industry professionals to integrate with each school's curriculum, our in-class, online and app-based teaching resources cover a complete range of subjects on energy efficiency and climate change. Two internationally recognised organisations, Solar for Schools and Engynious, have helped hundreds of schools throughout six countries to adopt their Education For Sustainability programme.

As a Not-for-profit in the United Kingdom, and now in five more countries, Solar For Schools' goal is to have 250,000 students engaged in sustainability learning within two years.

As a Design and Project Services company, Engynious procures solar energy funding while helping schools choose their own vendors.
